

**FOR IMMEDIATE RELEASE**

## **Enlocked Extends Free Email Encryption Solution With Safari Browser Support**

***Apple Mac users now have simple way to secure email***

**Palo Alto, Calif.—May 7, 2012—**[Enlocked, Inc.](#), an innovator in email security solutions for consumers and small business users, today announced the availability of a Safari version of its popular Enlocked email encryption service. Adding to the prior versions released earlier this year for Google Chrome, Firefox, and Microsoft Internet Explorer, the free service can now protect sensitive email messages in all of the most widely-used browsers. Apple users were already able to use Enlocked on their iPhone and iPad devices through the native apps available in the iTunes store, but the new plugin brings the application to their desktops as well. Safari users running the browser on Windows 7 personal computers are also supported.

“Since the initial launch of Enlocked earlier this year, we’ve heard from many users how much they appreciate how easy it is to improve the security of their private messages. Financial planners, attorneys, real estate professionals and many others are using Enlocked on a daily basis. By adding support for Safari, that same experience can now reach an even broader set of consumers and small businesses,” said Andy Feit, CEO of Enlocked.

The new Safari plugin for the Enlocked email encryption solution is available for download immediately from the company website at [www.enlocked.com](http://www.enlocked.com), and can be used with Gmail, Yahoo! Mail, Windows Live or AOL email.

### **About Enlocked**

Founded in 2011 by a team of information technology and security veterans, Enlocked is quickly becoming the solution of choice for users concerned with protecting their private email messages. The Enlocked solution addresses an important gap in security – most email today is sent entirely in the open, preventing users from being able to send important confidential information, or if they do send it, putting that data at risk.

While systems exist for encrypting email at the corporate level, they require significant resources (both financial and technical) to implement, leaving the individual user or small business with few options. Many of these systems do not support sending secure emails outside of the organization, thus leaving sensitive communications with contractors, consultants or partners vulnerable to eavesdropping.

By making email encryption SIMPLE and FREE, Enlocked allows everyone to safely send and receive secure emails, from whatever devices and email systems they use.
