

PCMag.com Names Enlocked Editors' Choice for Encrypted Email

Unmatched Security and Simplicity Cited in Product Review

SAN JOSE, Calif. (August 18, 2014) – PCMag.com (www.pcmag.com), the most trusted online brand for labs-based product reviews, just selected the current version of Enlocked's (www.enlocked.com) encrypted email service as an Editors' Choice for encrypted email. The Editors' Choice award is PC Labs' highest tech rating.

"This recognition by PCMag, the trusted online resource for all things tech, is an important validation of Enlocked™ capabilities," said Andy Feit, Enlocked's CEO. "That Enlocked is cited as the best encrypted email service reviewed by PC Labs says to our current users they made an excellent choice and to those considering it, they won't find a better option."

The review notes "For privacy, you'd be better off using encryption, but encryption is no good unless it's really, really easy for both the sender and the recipient. Enlocked 2 is just that easy, and...it's practical for individuals, small businesses, and even corporations. Local-only encryption and zero-knowledge passwords mean nobody can view your encrypted communication, not even the company itself."

Along with optimal simplicity and security, Enlocked was also praised for having plug-ins for Microsoft Outlook and Google Gmail that further simplify secure emailing, Apple and Android mobile apps, the versatile browser-based Enlocked Anywhere™ and even a pop-up that asks if you want to "Send Secure" before it's too late when an email contains words like "password" or "account."

About Enlocked

Enlocked Inc., founded in 2011 by security technology experts, creates encrypted email services for businesses and professionals that need to send sensitive information while complying with government and industry security and privacy regulations.

Enlocked is the only secure email service that lets sensitive information be sent with unmatched ease, certainty and efficiency, all while meeting or exceeding security and privacy requirements for personal, confidential or privileged material distribution. The service works with any email program, on the most popular devices and is designed so only the sender and recipient see the information, not Enlocked, not the sender's mail provider, not a government official, no one.

For more information or to download the browser extension or device plug-in, please visit www.enlocked.com.
